## PROFESSIONAL SUMMARY

---

Android Engineer with 5 years of experience building and shipping production Kotlin applications in fintech, insurtech and mobility. Works primarily with Jetpack Compose, Clean Architecture and MVI, and builds the internal tooling and design systems that let teams ship faster. Has owned apps end to end from first commit to Play Store release, and led a full product rebrand across a multi-module codebase.

## TECHNICAL SKILLS

---

**Languages:** Kotlin, Java, Python

**Android:** Jetpack Compose, Android SDK, Material 3, Coroutines, Flow, Room, Retrofit, Ktor, DataStore, WorkManager, Navigation

**Architecture:** Clean Architecture, MVI, MVVM, Multi-module architecture, Dependency Injection (Koin, Hilt), SOLID principles

**Cross-platform:** Kotlin Multiplatform (KMP/KMM), Compose Multiplatform

**Build & Delivery:** Gradle, Gradle Convention Plugins, Version Catalogs, KSP, CI/CD, Google Play Console, Firebase (Crashlytics, Analytics, Remote Config)

**Testing:** JUnit, MockK, Turbine, Espresso, Compose UI Testing

**Integrations:** REST APIs, M-Pesa Daraja API, Django (Python)

**Tools:** Git, GitHub, Bitbucket, Jira, Asana, Figma, Android Studio

## PROFESSIONAL EXPERIENCE

---

### Android Engineer, bolttech (formerly mTek)

Nairobi, Kenya | May 2026 - Present

- Led the end-to-end rebrand of the mTek insurance marketplace app to bolttech Kenya across a multi-module Kotlin codebase, coordinating engineering, design and product to ship the new identity in a single Play Store release under the existing package, so users carried over without reinstalling.
- Introduced Gradle product flavors (prod, dev, bolttech) so the legacy and rebranded apps built from one codebase, removing the need for a parallel fork and letting both variants ship from a single release pipeline.
- Owned bolttech DLM from first commit to production - an Android app for device financing and repair-claim management.
- Built a build-logic convention-plugin module that centralised dependency and version management across all 21 feature modules, eliminating version drift and removing duplicated Gradle configuration from every module.
- Designed and shipped a shared design-system module (Compose theme, typography and reusable components) that replaced duplicated UI implementations across feature modules and gave every new screen a single source of styling.

### Mobile Engineer, BuuPass

Nairobi, Kenya | Sept 2023 - May 2026

- Rebuilt the UI and booking flow of the BuuPass marketplace app, which consolidates multiple bus operators into a single search-and-book experience.
- Developed mobile point-of-sale ticketing systems for bus agents, automating ticket issuance that had previously been handled manually at the counter.
- Integrated M-Pesa payments through the Daraja API with instant digital ticketing, handling STK push, callback reconciliation and recovery from failed or timed-out transactions.
- Partnered with design and product to rework the highest-drop-off screens in the booking funnel, using analytics to identify where users were abandoning the flow.

- Refactored legacy modules and introduced Firebase Crashlytics, giving the team production crash visibility and a baseline to prioritise stability work against.

### **Android Developer, PhillQins Hub**

*Nairobi, Kenya | Jan 2023 - Sept 2023*

- Managed the full release lifecycle for client Android apps, including testing, debugging and Play Store submission.
- Profiled and optimised app performance through code refactoring and memory-leak fixes, keeping apps responsive on the low-end devices common in the local market.

### **Software Developer, PWD Gigs / Eldohub**

*Nairobi, Kenya | Oct 2021 - Jan 2023*

- Refactored the organisation's primary website for performance and scalability.
- Built a companion mobile application that extended the organisation's services to users on mobile.
- Implemented WCAG accessibility standards across the platform - screen reader support, contrast and keyboard navigation - making the service usable for the disabled community the organisation serves.

## **PROJECTS**

---

### **bolttech Kenya - Insurance Marketplace** — <https://play.google.com/store/apps/details?id=com.hillcroft.apps.mtek>

Consumer insurance marketplace that brings multiple underwriters and product lines into a single app, so users can compare quotes, buy cover and manage policies and claims without going through a broker. Built on a multi-module Clean Architecture codebase using Compose, MVI, Koin, Ktor and Room.

### **bolttech DLM** — <https://play.google.com/store/apps/details?id=com.bolttech.device>

Device financing and repair-claim app. Customers register a financed device, track and pay down their balance, and file and follow repair claims in-app, replacing a paper-based process that previously ran through agents.

### **GMS - Gym Management System** — <https://play.google.com/store/apps/details?id=com.samueljuma.gmsmobile>

All-in-one gym management app for owners and trainers covering member management, subscriptions, payment processing and attendance tracking. Built the Android client in Kotlin and the backend in Python (Django), with M-Pesa payments integrated through the Daraja API.

### **Soores BMS** — [https://play.google.com/store/apps/details?id=com.buupass.soores\\_marketplace](https://play.google.com/store/apps/details?id=com.buupass.soores_marketplace)

Passenger-facing app for browsing routes, comparing schedules and booking trips across Kenya, with M-Pesa payments through the Daraja API and instant digital ticketing.

## **EDUCATION & CERTIFICATIONS**

---

### **Taita Taveta University** — B.Sc. Mathematics and Computer Science

*Voi, Kenya | 2016 - 2021*

### **Thunderbird School of Global Management, Arizona State University** — Transformational Digital Leadership

*Remote | 2021*

### **African Leadership Experience** — Professional Foundations

*Nairobi, Kenya | Aug 2024 - Oct 2024*
